## Dr. Antonino G. Secchi, DMD, MS

Dr. Secchi maintains a private practice in Devon, PA. He is a Diplomate of the American Board of Orthodontics and member of the Edward H. Angle Society of Orthodontists.

Dr. Secchi received his DMD, Certificate in Orthodontics, and a Master of Science in Oral Biology from the University of Pennsylvania, same institution where he taught for over 10 years holding the position of Clinical Assistant Professor and Clinical Director of the Department of Orthodontics.

Dr. Secchi has published in various dental and orthodontic peer review journals in the areas of treatment mechanics and the straight wire appliance. He wrote the chapter "Contemporary Mechanics Using The Straight Wire Appliance" for the last three editions of the Graber/Vanarsdall/Vig orthodontic textbook.

Dr. Secchi received the 2005 David C. Hamilton Orthodontic Research Award from the Pennsylvania Association of Orthodontists (PAO), the 2010 and 2013 Outstanding Teacher Award from the Department of Orthodontics of the University of Pennsylvania.

Dr. Secchi is the founder of the "Complete Clinical Orthodontics System" (CCO System™) and had provided continuing education for orthodontists in the USA as well as throughout the world.

Dr. Secchi loves to spend time with his wife and 5 children. He is a passionate photographer and mountain biker.

## **"Simplifying Excellence in Treatment Mechanics".**

The cliché "...it is not only the bracket system you use, but HOW you use it..." has never been more relevant than now! We are continuously bombarded by new technologies that claim will change the way we practice. However, today more than ever, we hear of colleagues that changed their bracket system only to find out it provided no real advantage, but rather a disruption in the office. This lecture will explain how the Complete Clinical Orthodontics System (CCO System) integrates proven orthodontic principles with one of today "state of the art" appliance system to treat different types of malocclusions simplifying treatment mechanics, even in more challenging cases. Over the last 10 years, with its simplicity and efficiency, the CCO has positively impacted thousands of orthodontists around the world. Participants will learn how small details make a big difference in clinical outcome, how you can have control over the cases in all phases of treatment and what is the best wire sequence to take full advantage of the CCO System in different clinical situations.

## Dr. Julia GARCIA-BAEZA

graduated in Orthodontics from the University of Pennsylvania (USA). Member of the Spanish Society of Orthodontics and of the American Association of Orthodontics. She obtained her doctorate at the European University of Madrid; Dr. Julia Garcia Baeza is Clinical Assistant Professor in the Department of Orthodontics at the Mississippi Institute in Madrid. Dr. Julia Garcia Baeza's research interests are diagnosis, smile aesthetics and multidisciplinary treatment. She teaches Orthodontics in different regions of the world (United States, Indonesia, Philippines, Mexico, Italy, Romania, Spain and France). Dr. Garcia Baeza's commitment to Clinical Orthodontics and multi-working led him to join an exceptional professional dental disciplinary team in Madrid, in which "Passion for Excellence" is the main objective. She runs her own private practice of Orthodontics and multidisciplinary treatments in Madrid.

## **Orthodontics & Aesthetics: The Importance of a Multidisciplinary Concept.**

As orthodontists, a full mouth rehabilitation is our daily job. Canines and molars in class I, a correct overbite and overjet and the completion of the six keys of occlusion is our main goal. But there are some situations in which after we are done with our treatments the final look of the smile doesn't look as beautiful as it should. What is the problem in these cases? A multidisciplinary knowledge is essential from the beginning of our treatments. The study and the comprehension of the face proportions, the teeth and cooperation of an aesthetic dental specialist will customize each smile. This will create the difference from a standard result to a natural smile where the projection of it will recreate the beauty of our patient's personality.

I will show multidisciplinary cases in which the dental teamwork is absolutely essential. It is important to have the knowledge of what other specialties can achieve in the 21st century and also how to transmit them the importance of orthodontics to achieve excellent results in their cases. Without working together patient's satisfaction and our own satisfaction will never be accomplished
