EXPERIENCE

EXPERIENCE™ Interactive

Self-ligating brackets

Nearly 35 millions brackets tantamount to those of the EXPERIENCE™ range were bonded the past six years. The « Low friction/Control » association in the EXPERIENCE™ interactive system means comfort, speed and precision in your treatments, without any compromise, and most often without any rotation or tipping auxiliaries. Numerous prescriptions are available. Whether you use small section or full size arches at the end of treatment, you will find here the prescription you need.

EXPERIENCE™ Ceramic

Discreet when in the mouth, its excellent bond strength and its mechanical properties made it the reference in esthetic appliances. Its clip is rhodium-coated and melts into the look of the ceramic body of the bracket. First order information is compatible with EXPERIENCE™ Metal brackets. When both bracket types are present on the same arch, your appliance remains consistent...

EXPERIENCE™ Metal

Interactive brackets became the worldwide best-selling self-ligating systems. Low friction and control are the most sought-after parameters in orthodontic appliances. EXPERIENCE™ Metal gives you more:

- accuracy of the information the practitioner selected
- perfectly adapted anatomical bases (micro-sandblasted), limiting bond failures
- tooth numbering etched on the base

EXPERIENCE™ L

EXPERIENCE™ L is THE lingual interactive orthodontic bracket. Its easy-access golden clip makes archwire changes more practitioner-accessible and shortens treatment time to the greatest satisfaction of patients. Its small size limits speech problems and bond failures.

EXPERIENCE™ LSB

A lingual bracket similar to EXPERIENCE™ L, with a smaller base. It is the tool of choice for esthetic corrections in the anterior segment.

Invisible, it meets the requirements of an adult patienthood for cosmetic indications. It can be bonded directly on the lingual surfaces of the teeth or with a transfer tray.

EXPERIENCE

EXPERIENCE™ Ceramic

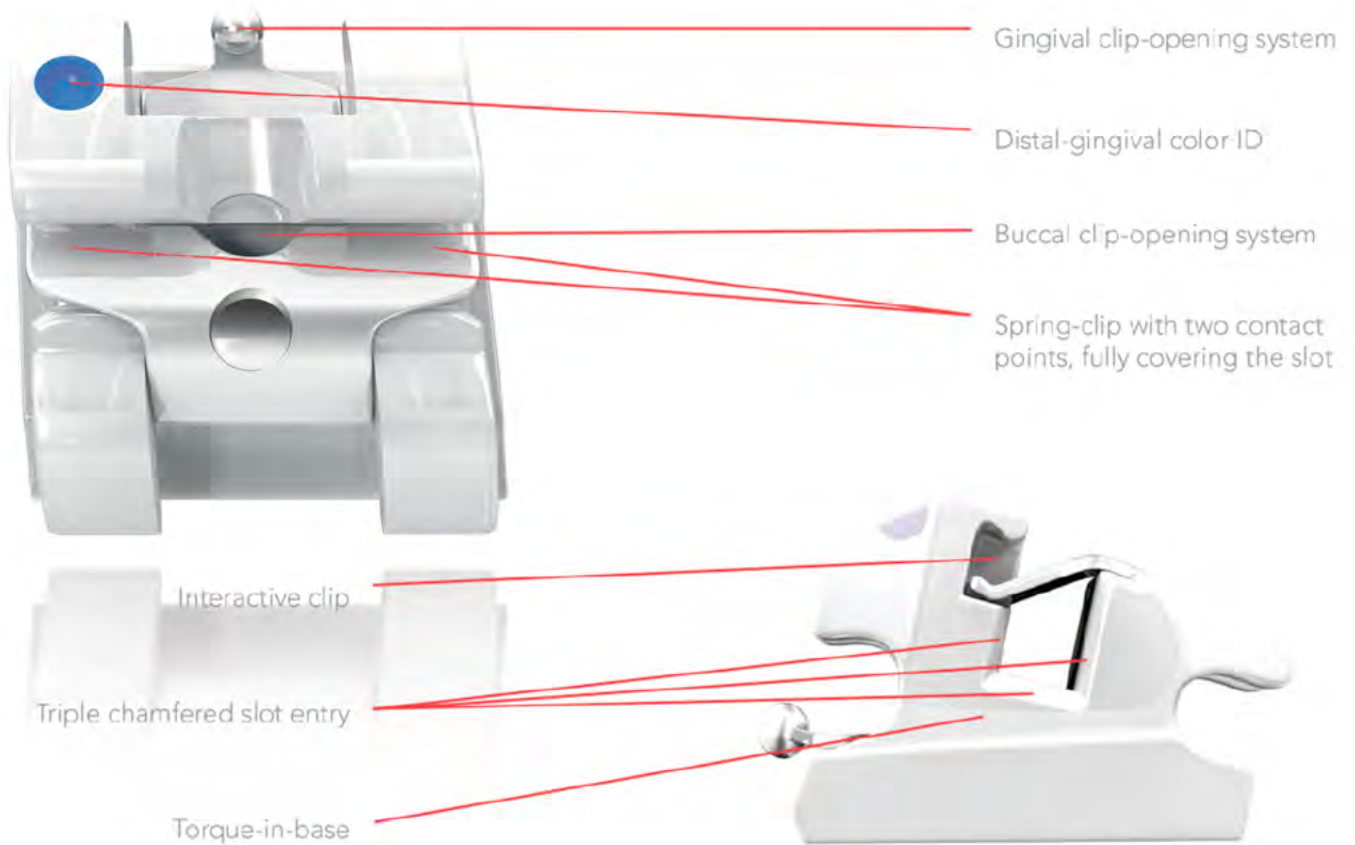

Esthetic

Product

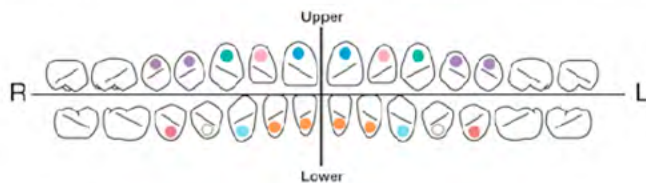

This Ceramic Injection Molded esthetic appliance features all the mechanical properties and the strength of a metal bracket. Quite inconspicuous thanks to its rhodium-coated clip; EXPERIENCE™ became the reference in esthetic appliances.

Color codes

The distal-gingival color code allows an identification of the bracket to prevent bonding errors. For some prescriptions, these color codes may be different on the bicuspids.

Rhodium Coated

The « Rhodium coated » technology, is used for Initialloy™ and BioActive™ archwires as well. Combined with EXPERIENCE™ Ceramic, the esthetics of the appliance is unrivalled. (See the Archwires section)

EXPERIENCE

SL Product

EXPERIENCE™ Mini Metal

The Experience™ Mini bracket logically meets the therapeutic requirements of modern Orthodontics:

- A self-ligating bracket only slightly thicker than a standard attachment that would need a ligature
- The possibility, according to the treatment plan, to opt for a passive or interactive system (higher control) in the buccal sectors (3-4-5).
- An easy-to-open reliable clip.
- The rigor in manufacturing quality ensures a high accuracy of information in the three planes of space.

Distal-lingual color ID

Clip-opening system on the buccal face

Spring-clip with two contact points; fully covering the slot

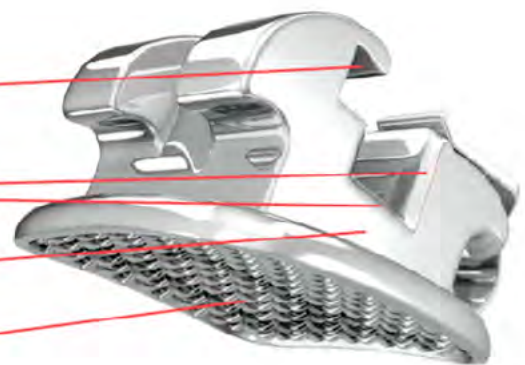

Long axis line for ideal positioning. Rhomboid bracket

Interactive or passive clip

Triple chamfered slot entry

Low profile.
Torque-in-base

The micro-sandblasted mesh base ensures superior retention. The number identifies the tooth.

EXPERIENCE

EXPERIENCE™ Metal

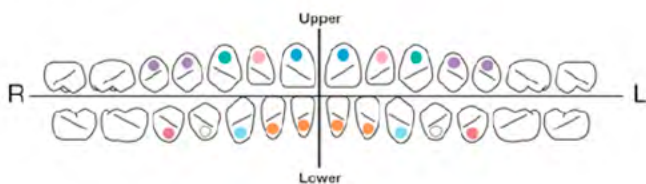

SL Product

Sliding and control made EXPERIENCE™ Metal the worldwide bestselling self-ligating bracket.

Color codes

The distal-gingival color code allows an identification of the bracket to prevent bonding errors. For some prescriptions, these color codes may be different on the bicuspid.

Codes and numberings on the base

All bracket bases are laser-etched with a Palmer notation for easy tooth and prescription identification.
